## **CANADA TOWERS PROVIDING PORTABLE TOWER SOLUTIONS FOR WIRELESS DATA TRANSMISSIONS**

Calgary, Alberta – Canada Towers is now providing portable towers for wireless communication needs, reaching to heights of 150'. As digital communications and wireless demands expand further into the Northern regions, portable towers provide a first point of connectivity for data and communication needs easily.

Portable towers allow our customers the flexibility to investigate and quantify wireless communication configurations quickly with no risk of lost investment. Canada Towers portable units can obtain a total height of 150' in less than 10 minutes, providing immediate communication connectivity. The robust chassis and tower design have been well tested in Northern Alberta the past year with great reviews. Multiple communication configurations are easily supported on the tower, designed to withstand 80 mph winds with over 400lbs of antenna load. Portable Tower Systems utilize a patent pending system designed to guy the tower to the outrigger; thus, the footprint necessary to deploy the unit is minimal at only 30 feet by 35 feet giving more flexibility to the user for any application. Our telescoping towers have redundant aircraft strength lifting cables that qualify them as the safest product of its type on the market. This safety feature is built into all of our Communications telescoping towers and will keep you on schedule and online on time.

Canada Towers represent a variety of portable solutions, allowing us the flexibility, industry demands. As a solution based provider, Canada Towers focus is the supply and rental of portable site service equipment for commercial and industrial applications. More information can be found at [www.canadatowers.com](http://www.canadatowers.com).
